

AI generated text, Academic integrity assessment

Gints Jēkabsons

Assistant professor, researcher

RTU, Faculty of Computer Science, Information Technology and Energy

AI generated text

Plagiarism definition

- **Plagiarism** is "the use of published or unpublished works (including extracts, statements, etc.) of another author without making an explicit reference to the author and/or the work, **and the use of content generated by an artificial intelligence tool without making an explicit reference to the use of the artificial intelligence tool.**"

(RTU Code of Academic Integrity, 2023)

Referencing AI-based tools

- If any content has been generated, this fact must be **acknowledged with a reference**
- **Reference syntax:**
Tool developer. Tool name and version (if known). Prompt: *The used prompt*. Web address.
[accessed date].
Example:
OpenAI. ChatGPT 5. Prompt: *What is artificial intelligence?*. <https://chatgpt.com/share/123>.
[accessed 25.02.2026.].
 Link to chat
- And in text accordingly: Artificial intelligence is xxx xxx xxx (OpenAI, 2026).
- Of course, it is not just about *ChatGPT* but about any tools that use generative AI

Referencing AI tools in other cases

- What if I used an AI-based tool in my text for grammar checking?
 - Name the tool, write the purpose, and give reference to it in the Introduction section of your work:

INTRODUCTION

XXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXX.
XXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXX.

Tools used in writing this
bachelor thesis

XXXXXXXXXXXXXXXXXXXXXXXXXXXXX
xxxxxxxxxxxxxx (OpenAI, 2026).

Name of the tool, purpose of its usage, and reference

(it is a good practice to mention here any tools you used)

When AI-tools are allowed

- **Allowed:**

- If not related to the skills and knowledge the student is expected to demonstrate
- If not related to the original contribution expected of the student
- In study courses:
 - If the generation is authorized or supported by the course professor
 - If the generation is required by the assignment

- **Not allowed:**

- If no reference to the tool used is added
- If the content is generated where the learner needs to demonstrate their contribution, knowledge and skills
- If the content is generated in very large volumes

Notes so there are no misunderstandings

- **Spelling and grammar** correction are not regarded as text generation
 - But, of course, text rewriting is not spelling/grammar correction
- If for any reason text generation is used, it must be understood that the student is in any case **fully responsible** for the generated text
 - Factual accuracy, critical thinking, correct logic, correct references, etc.
 - It is not the responsibility of the supervisor to look after any of those things
- AI-tools have to be referenced in case of image generation as well

Dealing with breaches of academic integrity in theses

Verification of originality of the text

- RTU uses software systems to help determine the originality of text
- **The aim of these systems** is to find and show potentially unoriginal passages of a text
- **But decisions are made by humans**
 - The system provides information
 - Human interprets this and other information and makes decisions

Who makes the decisions

- Final thesis examination results **are being reviewed for suspected violations**
 - For each suspicious thesis, a description of the situation is prepared and sent to the study program director
- The director of the study program convenes a special **committee** to review the potential issues of academic integrity
 - The committee includes: the director of the study program, the director of the institute, the vice-dean for studies, the plagiarism detection specialist, and the supervisor of the thesis
- If a violation is found, an **academic integrity violation report** is written
 - The report is examined and approved by the faculty Dean
 - And the student has the opportunity to explain the situation in writing
- The thesis defence board as well has the right to take appropriate action

Assessing academic integrity in theses

- **Correct references** to the sources used
- Not making the work a **compilation** of other author's texts
- **Correct reference** to AI tools if used
- Not making it just an **AI-generated work**
- Which **components** of the concrete work are involved in the potential violations?
 - Overview, analysis, summary, idea, realization, experiments, result, conclusion, ...
- How **intentional** is the violation
 - Copying/translating/generating in large volumes, consistent inadequacies with references, etc.
- Has the student had any **prior violations**
 - There are more severe consequences for repeat offences
- *Each work is an individual situation*

Assessing academic integrity in theses

- To what extent are there textual matches
 - Total volume and **most used sources**
- Are literature **references** given and are they **correct**
- The extent to which the text has been **generated** and whether the text generation tool has been appropriately **referenced**
- **Where** exactly in the thesis are the potential violations
 - Overview, analysis, idea, novelty, results, conclusions, ...
- How **deliberate** is the violation
 - Copying/translating/generating large volumes, fake references, etc.
- Whether the student has **previous history of misconduct**
 - Repeated offences have more serious consequences

Possible committee decisions

- There are **no violations** in the theses, and the thesis is allowed to be defended without remarks
- The thesis has **no academic integrity violations** and is admissible for defense, but it is found to contain **poor academic practice**, which is brought to the attention of the thesis defense committee
- **There are breaches of academic integrity** in the thesis, and it is not allowed to defend it
 - For minor infringements - allow work to be improved
 - In cases of more serious infringements - allow the student to write a new thesis on a new topic
 - In both cases - defend the thesis after six months (for Bachelors) / one year (for Masters)
- The thesis has a very **serious breach** of academic integrity, and it is proposed that the student should be **expelled** from RTU

Thank you for your attention!
